PROJECTS

FIS Eduverse- Learning App —(FIS Eduverse)

Architected and developed the ASP.NET Core backend for a comprehensive learning application. Key features include a student examination system, secure access to class notes and resources, and an administrative panel for exam creation and study material upload. Integrated Firebase for push notification functionality and implemented a secure role-based authorization model.

EXPERIMENT PROJECTS

Chat App —(Video / Source Code)

Developed a real-time chat application with one-on-one and group chat functionalities. The frontend was built with Angular, and the backend utilized .NET Core with SignalR.

Shopping Website—(Video / Source Code)

Developed an Angular-based e-commerce front-end with "add to cart" and "add to wishlist" functionalities.

Url Shortener—(Video / Source Code)

Developed a URL shortener website using ASP.NET Core and SQL Server (SSMS). This application allows users to shorten long URLs and provides limited access control for the generated links.
